

Hochschule Kaiserslautern University of Applied Sciences

Applied Research Center Highly Efficient Technical Systems

Equipment at the department Materials Science and Materials Testing WWHK

Mechanical materials testing:

Various testing machines (electromechanical, servo-hydraulic) (up to 160 kN dynamic, up to 400 kN quasi-static), equipped with optical and electrical sensor systems (e.g. strain measurement, thermography, resistometry, magnetic field sensors).

Material characterization:

Fully equipped metallography laboratory (including microhardness testing), with various stereo, reflected light and confocal microscopes as well as 2D surface perthometers.

Analytics:

2 x-ray diffractometers, atomic force microscope, scanning electron microscope (user group on campus Zweibrücken), spectral analysis.

Material treatment:

Heat treatment furnaces (up to 1200°C, vacuum).

Non-destructive testing:

Thermography, high frequency pulse analysis, Barkhausen noise, ultrasonic testing, various magnetic field sensors.

Laboratory equipment at WWHK

Contact:

Prof. Dr.-Ing. Peter Starke Hochschule Kaiserslautern University of Applied Sciences Schoenstr. 11 67659 Kaiserslautern Germany phone: +49 (0)631/3724-2389 e-mail: peter.starke@hs-kl.de

Project partners:

- Saarland University
- TU Dortmund University
- Global Research for Safety
- University of Stuttgart, Materials Testing Institute

Funding: DFG, BMWi, BMBF
